

Parin[®]
Easy Plumbing
FAUCETS

New definition of — *luxury* —

This new product blend
three key elements:

advanced technology,
talented design, and
sustainable solutions.

Water Saver

Easy Move

Chrome Finish

Quick Fixing

Our Vision

To transform ourselves into a worldwide competitive market in Bath fittings.

Our Mission

To ensure and enhance the quality of Bath Fittings product throughout the world by providing quality assured products. Making Bath Fittings products from better to best is our motto.

Quality Policy

We at Commander Polyplast are committed to consistently supply of our Products which satisfy our customer's requirement in respect to product quality and delivery by continuous improvement in Method, Resources, Employee Skill and Work Environment.

Company Profile

Commander Polyplast was established in the year 2011 with manufacturing of “PARIN” Brand uPVC Pipes and Fittings as one of the well known “COMMANDER” Diesel Engine Group of Companies. From 2015 we have started manufacturing cPVC Pipes and Fittings, and from 2017 we started Manufacturing SWR Pipes & Fittings. Commander Polyplast is certified with ISO 9001:2015 Certification and D&B.

As we are in this market from 10 years, we also know that parallel to this pipe & fittings product CP Bath Fitting also having a huge demand in India & worldwide, so we are happy to announce “Parin” Brand CP Bath Fitting with Premium & Luxury item.

Our plant is developed in a well located industrial zone. The infrastructure of our company is well planned with advanced technology. Here we have advanced technology machinery, well planned production line, technical manpower staff, and skilled labour with qualified engineers.

We here works on improving our product day by day so that we can serve our customers a good product and satisfy them. Here we believe in quality. Quality is our strength.

Design & Technology

1150°C

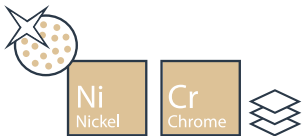

The virtue of brass and gravity die casting

Soft-water corrosion and hard-water calcification are two biggest enemies for any water system. To combat both effectively, we use the purest possible brass available. An alloy of copper and zinc, brass is resistant to corrosion and calcification, which make it the perfect metal for a faucet body. Combine that with the advanced imported gravity die casting machines, which helps in achieving flawless casting quality.

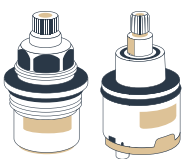

Precise and immaculate machining

Accurate machining increases the value of the casting quality, simply because high degree of smoothness and precise dimensions are critical for flawless performance of the faucet. To suit the needs of the market, we use a mix imported as well as indigenous machines to maintain high precision and achieve desired shapes. A clever combination of pneumatic, hydraulic and PLC computer controlled technologies are used for the same.

Optimum electroplating

In sync with the international standards, high-quality electroplated finish is achieved with Nickel and Chrome. We use insoluble Nickel to ensure unflinching finish of the product and polished finish is achieved with optimum balance of Chrome. The international standards prescribe the use of 10 microns of Nickel and 0.3 microns of Chrome, which is maintained throughout the process.

Faultless ceramic discs

The ceramic discs are the critical part of the faucet. Highly reliable materials are used to craft these fittings. The production process is designed and executed in such a manner that the product keeps performing at its peak, at high as well as low temperatures. We also forge the critical components to improve the congruity of the material.

Amazing aerators

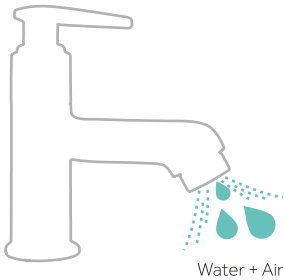

Aerators have a specific role to play in a faucet. They process aeration in the water and reduce its pressure. They give a pleasant feel to the user, but more importantly, they drastically reduce the amount of pressure in the water. The good part is, the users even don't realise it. Aerators in our faucets, with their finest engineering, help save the water for our next generations.

Remarkable o rings

Made of exclusively virgin grade rubber, the O-Rings and bottom gaskets of our faucets help the faucet perform at its best. These seals are designed and manufactured to such perfection that they do not get deformed even in a very long run.

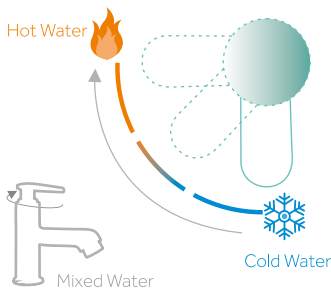

Energy Saving Technology Inside

Water saving system

The taps equipped with the water saving system have a flow limiter that, by mixing air and water, is able to reduce water and energy consumption (boiled), without affecting comfort.

In our water saving faucets, we have a flow limiter able to mix air and water. In this way, we can reduce the water and energetic consumptions, without losing comfort.

Energy saving system

Energy saving technology allows rotation of the mixing lever only from right to left.

Therefore, the starting point of the lever (Always and only in the centre) prevents the accidental call of hot water and the consequent priming of the boiler.

This allows advantages both in terms of energy and in terms of the duration of the boilers.

Ceramic Cartridge

All single lever are fitted with European cartridges to ensure outstanding & leaking performance.

Fluid Flow Aerators

Foam flow faucets in all ranges are fitted with world leader, NEOPERL- made Germany, honeycomb aerators that mix air with water to form a stream of aerated water (foam flow) which does not splash or spill.

Premium Finishes

All Parin faucets are made with double plated finish and hand polished to perfection.

Comfortable Handle

All Parin faucets operates so smooth with an action to naturally they also offer precise control of flow and temperature.

We set the standard for design and dependability.
